Practices And Challenges For The Bookmark File PDF Supply Chain Management

The impact of supply chain management practices on competitive advantage and organizational performance is introduced based on an outline and an evaluation of the prevalent focused frameworks (e.g. agile, lean, and Six Sigma). Chapter Four allows readers to explore the ways location and logistics impact the decision to be made by the wholesaler, taking into account all the expected costs and achieving the minimization of total logistics costs.

Chapter Two highlights global outsourcing, also known as off-shoring, and explains the issues of off-shoring. This chapter explains global outsourcing, past and present trends, and lessons learned from the US perspective based on US companies that have implemented off-shoring strategies.

Chapter Five describes the alignment of supply chain management practices with corporate strategy. The purpose of this research is to address the emerging practice of green supply chain management (GSCM) and examine previously unexplored links between these practices and performance environmentally, operationally, and economically. Although the direct effect of environmental performance on economic performance is more likely to show a higher level of GSCM adoption. In addition, the study found GSCM practices can improve the firm's performance as outcome measures of GSCM practices. The model was tested using confirmatory factor analysis (CFA) and structural equation modeling (SEM) based on survey data collected from 239 manufacturing firms in Korea. The results showed that an agile, adaptable, and aligned performance integration. A balanced approach follows the natural flow through the supply chain. Well-organized chapters demonstrate the practical applications and challenges in supply chain management.

Principles of Supply Chain Management: A Balanced Approach

A research was done to establish Green practices and performance of government hospitals in Nairobi County. The study had three research objectives, namely: to answer to what extent Green supply chain management is practiced in Government Hospitals in Nairobi County; to determine the practices in Healthcare supply chain management that enhances performance in Nairobi County; and to establish the challenges faced in the implementing Green supply chain management practices in Government Hospitals in Nairobi County. The research design used was a census survey, frequencies and percentages were used to analyse and represent objective one regression analysis was used to analyse the relationship between Green supply chain management practice and performance of Government Hospitals. the finding were represented in tables. It emerged that there is a significant relationship between green supply chain practice and performance. Data was collected using a questionnaire, that was administered through drop and pick later method. Percentages and frequencies were used to analyse the first objective, while objective two and three correlation and regression methods were utilized. Findings from analysis of objective one indicated that most of the government hospitals in Nairobi had implemented a number of green supply chain management practices. The study focussed on Government Hospitals in Nairobi County, as given in the ministry of health website. The study confirmed that Green supply chain practices are relevant in the performance of supply chains. The study recommends that hospitals should empower and educate their employees on the importance of efficient waste management and reverse logistics approaches to enhance green supply chain. A major limitation of the study was that, it only studied Government health facilities within Nairobi County. Another limitation of the study was that, it did not highlight the suppliers' willingness to participate in aspects of green supply chain management. Suggestions for further research would be to establish the impact of reverse logistics on efficient product consumption along the supply chain. Another area of future research will be to evaluate suppliers' willingness to conform to consumers' eco design, and its impact on performance.
